# 2024 HAL Elections

Election Committee Chair: **Jim Johnson**

Elections held at the January 18<sup>th</sup>, 2024 HAL annual meeting to elect the 2024 Board of Directors

President

2<sup>nd</sup> Vice President

Treasurer

1st Vice President

Secretary

Event Coordinator

All offices are considered open to all interested HAL members. Send nominations (self or others) to [election@howardastro.org](mailto:election@howardastro.org) by 7pm on January 17<sup>th</sup>, 2024

New Board's term begins February 1<sup>st</sup>, 2024

# Star Parties...

## HAL's 2024 Scheduled Star Parties (Stay Tuned for Date Announcement/s)

Month	Date	Invitees
March	18	Members
March	25	Public
April	15	Members
April	22	Public
May	1	Members
May	27	Public
June	3	Members
June	24	Public
July	5	Members
July	22	Public
August	12	Members
August	26	Public
September	9	Members
September	23	Public
October	14	Members
October	21	Public
November	04	Members
November	11	Public

## Note about Impromptu Star Parties & "Remote" Impromptu Star Parties

Don't forget to keep an eye out for impromptu events as we are due for some good weather

Note: if you're not already on the impromptu mailing list and would like to join there are instructions on the [howardastro.org](http://howardastro.org)

[Impromptu Mailing List \(howardastro.org\)](http://howardastro.org)

(you can find a link to this page from the website home page under the "Hal Info" dropdown menu)

# Nov. 11<sup>th</sup> Public Star Party at Alpha Ridge

# Book of the Month

Title:

- Space Exploration: A History in 100 Objects

Author:

- Sten Odenwald

Length:

- 224 pages

Audience Level:

- Beginner Friendly
- Intermediate
- Advance/Experienced

# Tonight's Agenda, November 16<sup>th</sup>, 2023

- Introductions

Debra Buczkowski

Johns Hopkins Applied  
Physics Laboratory

Principal Professional Staff

Space Exploration Sector  
Research Branch  
Moon and Rocky Planets Group  
Planetary Surface Geology Section

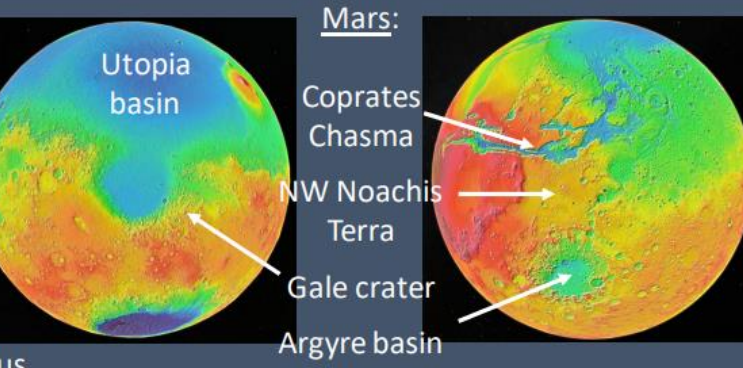

Dr. Debra Buczkowski - Senior Staff Scientist  
Johns Hopkins Applied Physics Laboratory

Venus Tectonism

## Debra Buczkowski

- Dr. Buczkowski is a structural geologist and planetary geologic mapper who has completed projects on the rocky bodies of the Solar System, including Mercury, Venus, the Moon, Mars, Eros, Vesta and Ceres (and Earth!).

# Research: structural analysis and geologic mapping of rocky planetary bodies

Irnini Mons and Lachesis Tessera, Venus

Equatorial troughs on Vesta

Floor-fractured craters on Ceres

Linear structures on Eros

Mars:

Utopia basin

Coprates Chasma

NW Noachis Terra

Gale crater

Argyre basin

Field work in Montana

Layered volcanic flow materials on Oahu

Field work in Lavabeds National Monument

At Meteor Crater, Arizona

Field work in Iceland

# Solar Flares

The most powerful flare measured with modern methods was in 2003, during the last solar maximum, and it was so powerful that it overloaded the sensors measuring it. The sensors cut out at X28. Later estimated to be about X45.

SOHO/EIT (ESA & NASA)

## Solar Flare Classes

X – Can create long lasting radiation storms which can harm satellites, airplanes flying near the poles, potential to create global transmission problems, and worldwide blackouts.

M – Can cause brief radio blackouts at the poles and minor radiation storms that might endanger astronauts.

C – Too weak to noticeably affect earth

B – Very weak

A - Weakest

An X-class flare produces 10 times the energy output of a C-class flare and 100 times the energy output of an M-class flare.

The energy release during a flare is typically on the order of  $10^{27}$  ergs per second. Large flares emit up to  $10^{32}$  ergs of energy.

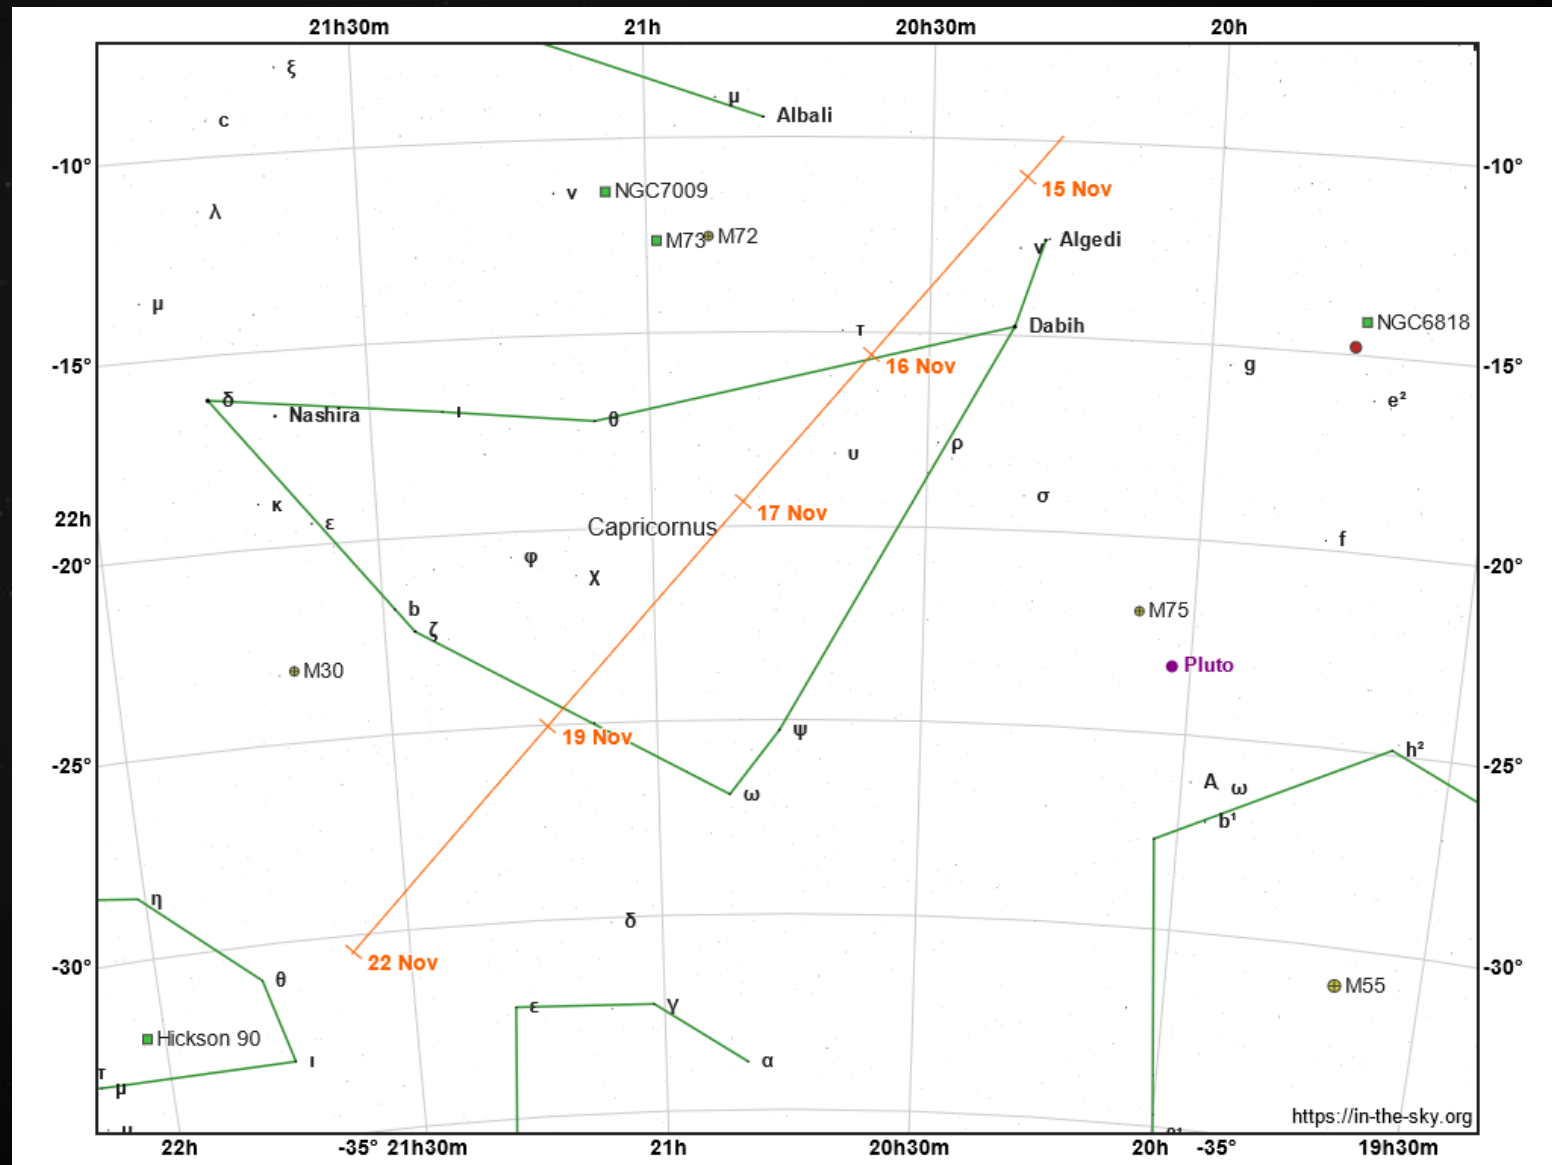

Ten million times the energy released from a volcanic explosion. Less than one-tenth of the total energy of the Sun released every second.

# Shallow Sky Highlights for Nov-Dec 2023

- *Mercury & Mars* poor targets currently
- *Venus* continues to be a great pre-dawn object, still  $40^{\circ}+$  in western elongation. It's gibbous phase will shrink some over the next 4 weeks from 22" to 18".
- *Jupiter* reached opposition amid Aries on Nov 3<sup>rd</sup> and is a prime observing target. You may want to consider trying to catch the GRS – it may be one day that you'll tell your grandkids how you got to see it before it shrank into oblivion 😊
- *Saturn* is still a great target but now is past the meridian once it emerges from twilight. The planet's tilt continues to close up the rings to our view, so get your fix now as next season it'll be hard to even discern Cassini's division
- *Leonid Meteor Shower* will occur this Friday night. While not as prolific as the Perseids or Geminids, it is a proven performer with roughly 10-15 meteors per hour. Best time is 2-5 a.m., so cancel your plans for Saturday morning so you can sleep in 😊

# Comet C/2023 H2 (Lemmon)

Date	Mag
2023 Nov 15	6.2
2023 Nov 17	6.7
2023 Nov 22	7.9
2023 Nov 27	9.0
2023 Dec 1	9.7

# What's Up in Space: Euclid's First Science Images

- Euclid released its first science images on November 7, 2023
  - European Space Agency (ESA) mission with contributions from NASA
  - Launched to Sun-Earth L2 on July 1, 2023 on a SpaceX Falcon 9
  - Mission is to survey 1/3 of sky to deep limits over six years
    - Purpose is to learn about Dark Matter and Dark Energy
    - Will create the largest 3D map of the Universe yet made

- Two instruments
  - Visible Instrument, VIS
    - Sees 100x more area than JWST NIRCam
  - Near-Infrared Spectrometer and Photometer, NISP

ESA/Gaia/DPAC; Euclid Consortium

# What's Up in Space: Euclid's First Science Images

## Perseus Cluster of Galaxies

- Perseus Cluster is 240 million light years distant
- Taken with VIS and NISP
  - 0.7, 1.1, and 1.7  $\mu\text{m}$  filters
    - About five hours of exposure time
    - H $\alpha$  is in the blue channel!
- Shows thousands of galaxies, many never before observed
- Distortions in background galaxies provide information about Dark Matter via weak lensing

ESA/Euclid/Euclid Consortium/NASA, image processing by J.-C. Cuillandre (CEA Paris-Saclay), G. Anselmi, [CC BY-SA 3.0 IGO](https://creativecommons.org/licenses/by-sa/3.0/)

# What's Up in Space: Euclid's First Science Images

## Spiral Galaxy IC 342

- IC 342, the “Hidden Galaxy,” lies behind Milky Way dust
  - As large as the Full Moon in the sky
- Taken with VIS and NISP
  - 0.7, 1.1, and 1.7  $\mu\text{m}$  filters
  - About 1 hour of exposure time
- The wide-field view allows detailed study of the star formation history
- Mapping galaxies through space shows us the distribution of Dark Matter

ESA/Euclid/Euclid Consortium/NASA, image processing by J.-C. Cuillandre (CEA Paris-Saclay), G. Anselmi, [CC BY-SA 3.0 IGO](https://creativecommons.org/licenses/by-sa/3.0/)

# What's Up in Space: Euclid's First Science Images

## Globular Cluster NGC 6397

- Globular cluster in the Milky Way
  - 7800ly from the Sun
- Taken with VIS and NISP
  - 0.7, 1.1, and 1.7  $\mu\text{m}$  filters
  - About 1 hour of exposure time
- Images of globular clusters will be used to look for “tidal tails” → prior interactions with their host galaxy
- Lack of tidal tails might indicate Dark Matter haloes around the cluster

ESA/Euclid/Euclid Consortium/NASA, image processing by J.-C. Cuillandre (CEA Paris-Saclay), G. Anselmi, [CC BY-SA 3.0 IGO](https://creativecommons.org/licenses/by-sa/3.0/)

# What's Up in Space: Euclid's First Science Images

## Horsehead Nebula (Barnard 33)

- Taken with VIS and NISP
  - 0.7, 1.1, and 1.7  $\mu\text{m}$  filters
  - About 1 hour of exposure time
  - $\text{H}\alpha$  is in the blue channel!
- Astronomers hope to find many Jupiter-sized planets and brown dwarfs in these observations
